Introduction	1
Summary of Official Ministry Parking Lots	5
Summary of Unsigned Parking Areas	7
Summary of Official Municipal Parking Lots	7
Official Ministry of Transportation Parking Lots	8
Unsigned Parking Areas	63
Official Municipal Parking Lots	79

In recognition of the growing demand for parking space in the Greater Toronto Area, the Ministry of Transportation initiated a study to determine the extent of the parking problem. The study was conducted in 1983 and 1984. The results of the study are presented in this report.

In the year since the 1983 survey, the number of vehicles registered in the Greater Toronto Area has increased by 4.7%. Two additional factors have contributed to the increase in the number of vehicles: the increase in the number of vehicles per household and the increase in the number of vehicles per person. The number of vehicles per household has increased from 1.1 to 1.2, and the number of vehicles per person has increased from 0.1 to 0.2.

The number of vehicles per household and the number of vehicles per person are both increasing. This is due to the relative stability of fuel prices and the increasing number of vehicles per household and per person.

As part of the inventory, 18,000 vehicles were surveyed. Eighteen sites with a total of 1,000 vehicles were surveyed. The results of the survey are presented in this report.

Three disposal sites established by the Ministry of Transportation were surveyed. The results of the survey are presented in this report.

INTRODUCTION

The annual inventory of carpool parking activity was conducted in November. The inventory surveyed parking areas for the following: signs, facilities, and vehicle counts.

RESULTS

- Total number of official ministry parking lots: 54
- Total number of parking spaces: 3600
- Total number of vehicles parked: 2119
- Average overall occupancy: 59%

In recognition of the growing demand for carpool parking facilities, the Ministry of Transportation opened its first six carpool parking lots in 1979. Since that time, Ontario has continued to steadily expand and improve its network of carpool parking lots; the ministry now operates a total of 54 lots with 3600 spaces.

In the year since the 1990 inventory, the ministry has opened two new carpool parking lots in eastern Ontario and expanded one other, which altogether increased the number of spaces by 4.7%. Two additional lots in central Ontario, which have been at or near capacity for the last several years, are currently being expanded to increase the number of spaces available. Improvements were also made to several other lots.

The number of vehicles using the lots dropped slightly from last year, due in part to the relative stability of fuel prices since the end of the Gulf war. Nine lots were at or near full capacity at the time of the survey.

As part of the inventory, many other sites were checked for carpool parking activity. Eighteen sites with carpool activity are identified in the inventory. A total of 190 vehicles were parked at these sites.

Three carpool lots established by the municipality of Sutton and the County of Victoria were surveyed.

BENEFITS

The 2119 vehicles parked in official ministry parking lots:

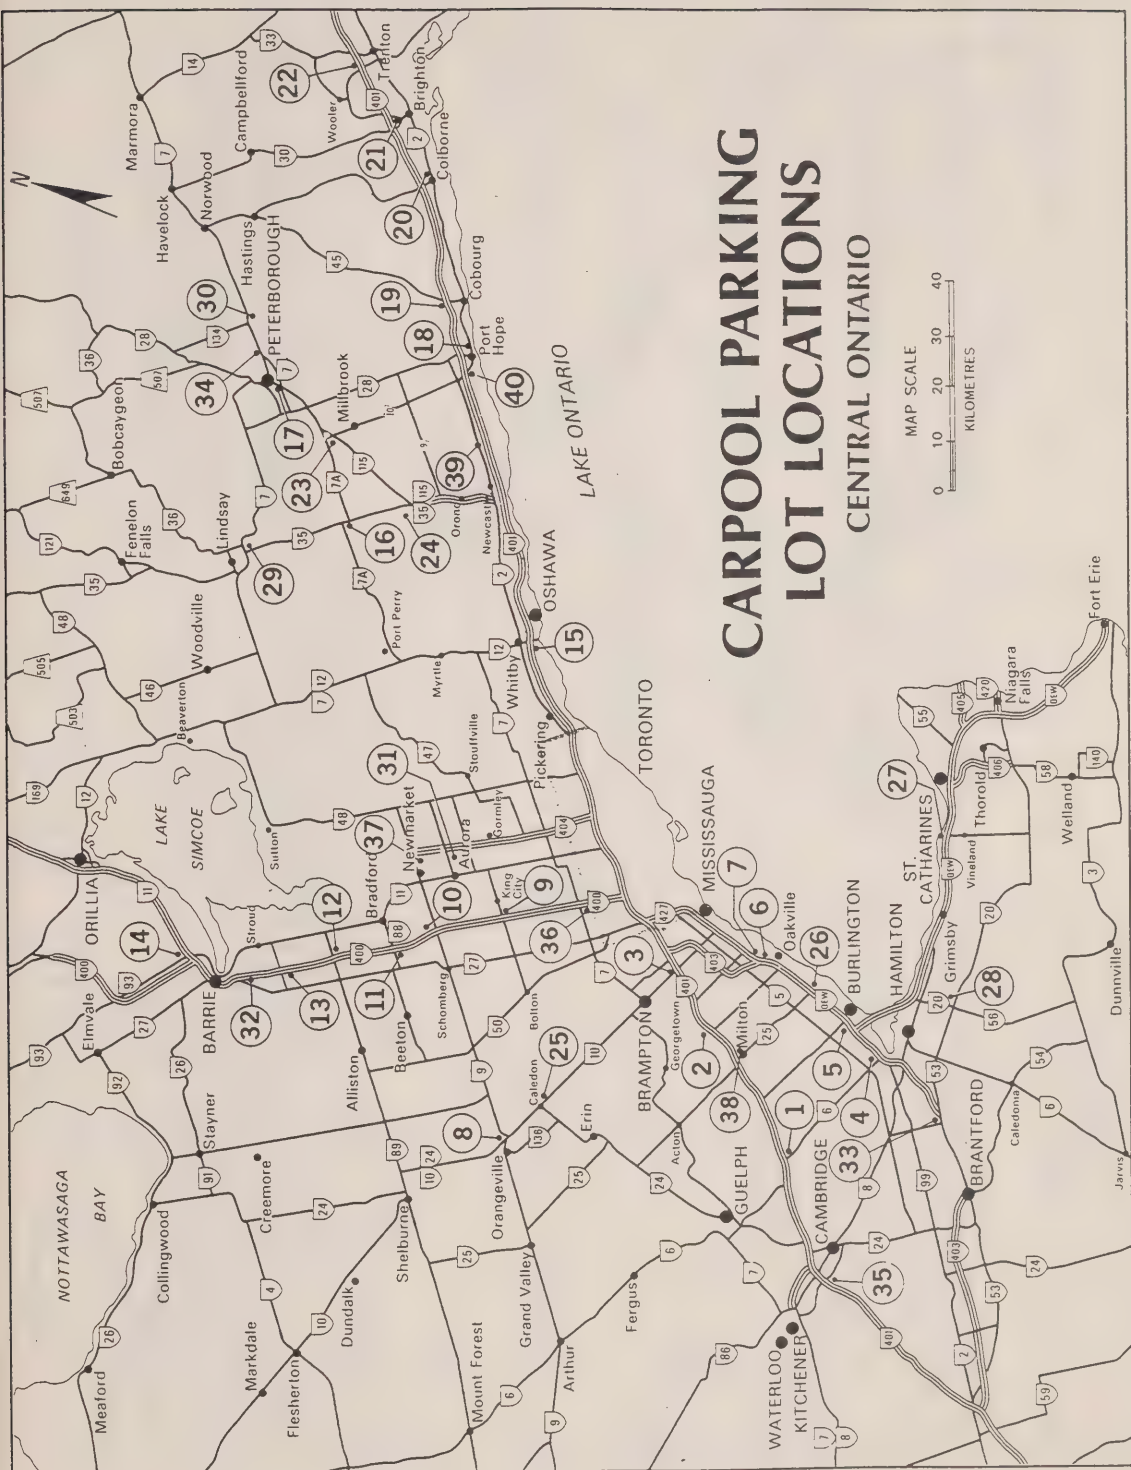

- **SAVE ENERGY** – 6 350 000 L of gasoline annually.
- **REDUCE CONGESTION** – reduced annual vehicle kilometres travelled by 50 008 000 (during the peak hours).
- **IMPROVE SAFETY** – around intersections; vehicles are no longer parked along interchange ramps.

These benefits are calculated based on the following assumptions:

- Average distance from lot to work: 47.2 km. Taken from TEMP report SAR-81-02, Carpool Parking in the Toronto Commutershed (based on a 1979 survey).
- Fuel efficiency of vehicles: 12.7 L/100 km based on Statistics Canada 1988 Fuel Consumption Survey.
- 250 working days per year.

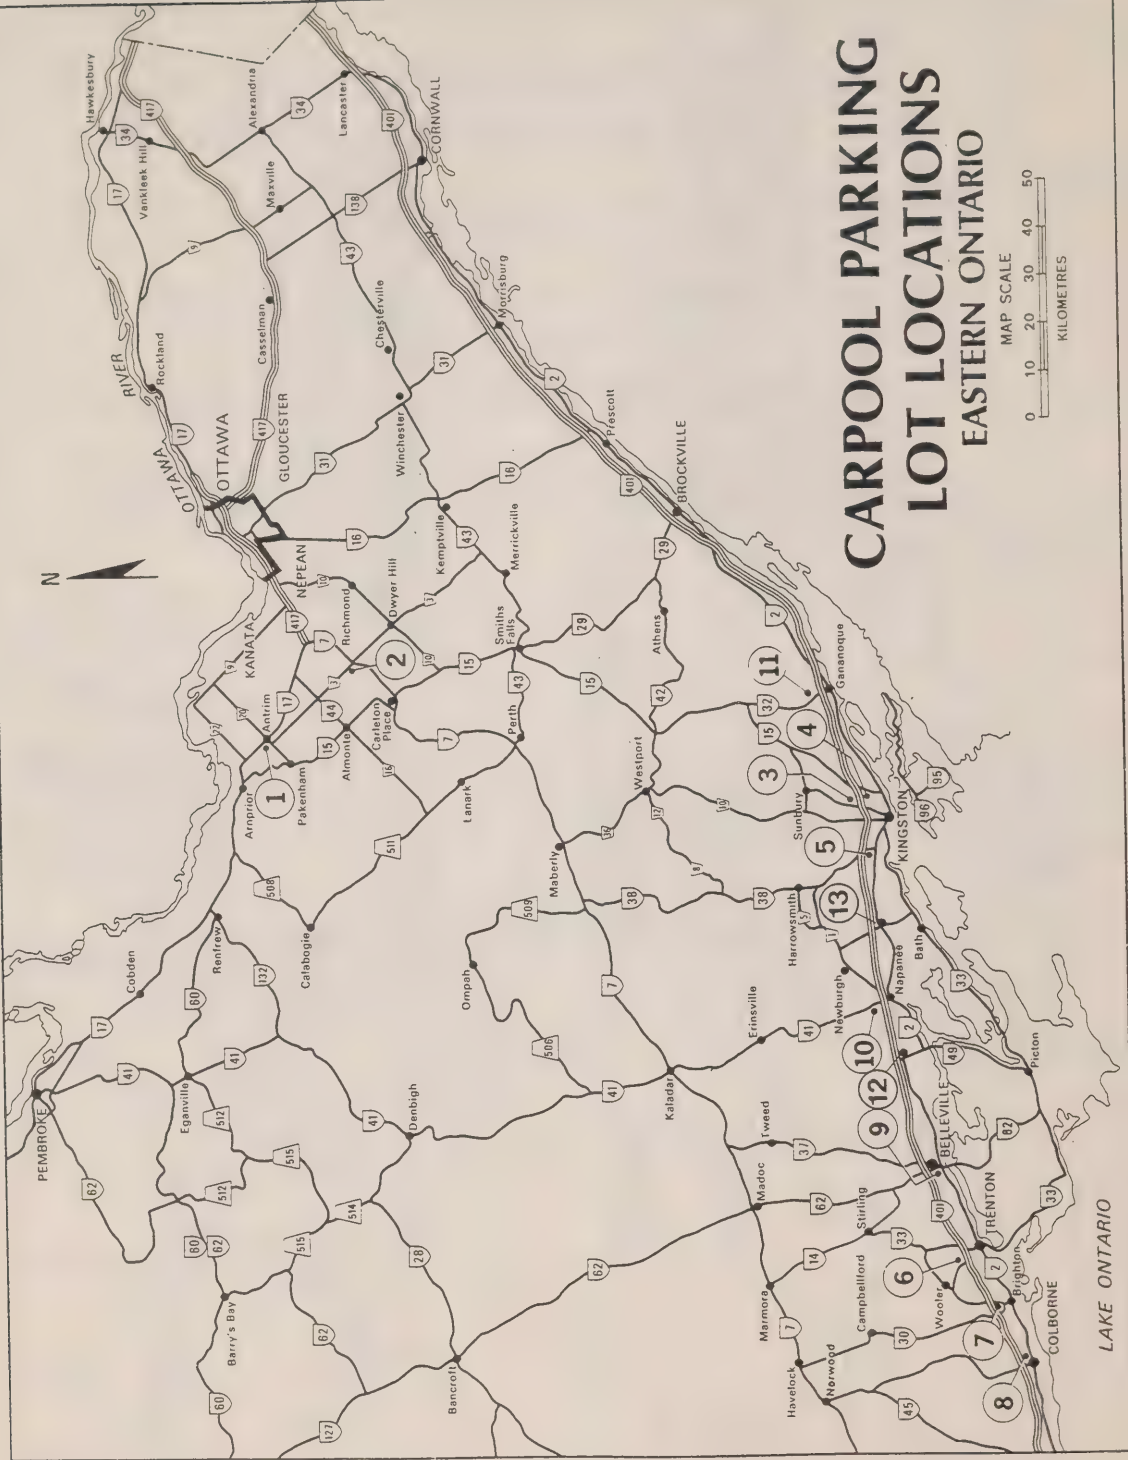

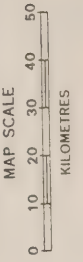

These figures represent only the savings generated by daytime users of the parking lots during a normal work week. Further savings are generated by the many week-end and evening users of the lots, who carpool perhaps for shopping or recreational purposes.

The 3600 parking spaces provide a safe, convenient, and highly visible service to the public.

INTRODUCTION

The current annual inventory of carpool parking activity was conducted in November 1992. The inventory surveyed parking areas for the following: signs, facilities, and vehicle counts.

RESULTS

- Total number of official ministry parking lots: 55
- Total number of parking spaces: 3802
- Total number of vehicles parked: 2072
- Average overall occupancy: 54%

In recognition of the growing demand for carpool parking facilities, the Ministry of Transportation opened its first six carpool parking lots in 1979. Since that time, Ontario has continued to steadily expand and improve its network of carpool parking lots; the ministry now operates a total of 55 lots with over 3800 spaces.

In the year since the 1991 inventory, the ministry has opened two new carpool parking lots in central Ontario and expanded three others, which altogether increased the number of spaces by 202 (5.6%). A new lot was constructed at Hwy 401 and Hwy 37 to replace an expensive leased lot. Improvements were also made to several other lots. One lot located at Q.E.W. and Ford Drive was closed during 1992 due to poor accessibility, low usage, and continuous and costly maintenance problems.

The number of vehicles using the lots dropped slightly from last year, due in part to the relative stability of fuel prices and the recession. Eight lots were at or near full capacity at the time of the survey.

As part of the inventory, many other sites were checked for carpool parking activity. Ten sites with carpool activity are identified in the inventory. A total of 99 vehicles were parked at these sites.

Four carpool lots established by the municipality of Sutton and the counties of Victoria and Durham were surveyed.

BENEFITS

The 2072 vehicles parked in official ministry parking lots:

- **SAVE ENERGY** – 6 210 000 L of gasoline annually.
- **REDUCE CONGESTION** – reduced annual vehicle kilometres travelled by 48 900 000 (during the peak hours).
- **IMPROVE SAFETY** – around intersections; vehicles are no longer parked along interchange ramps.

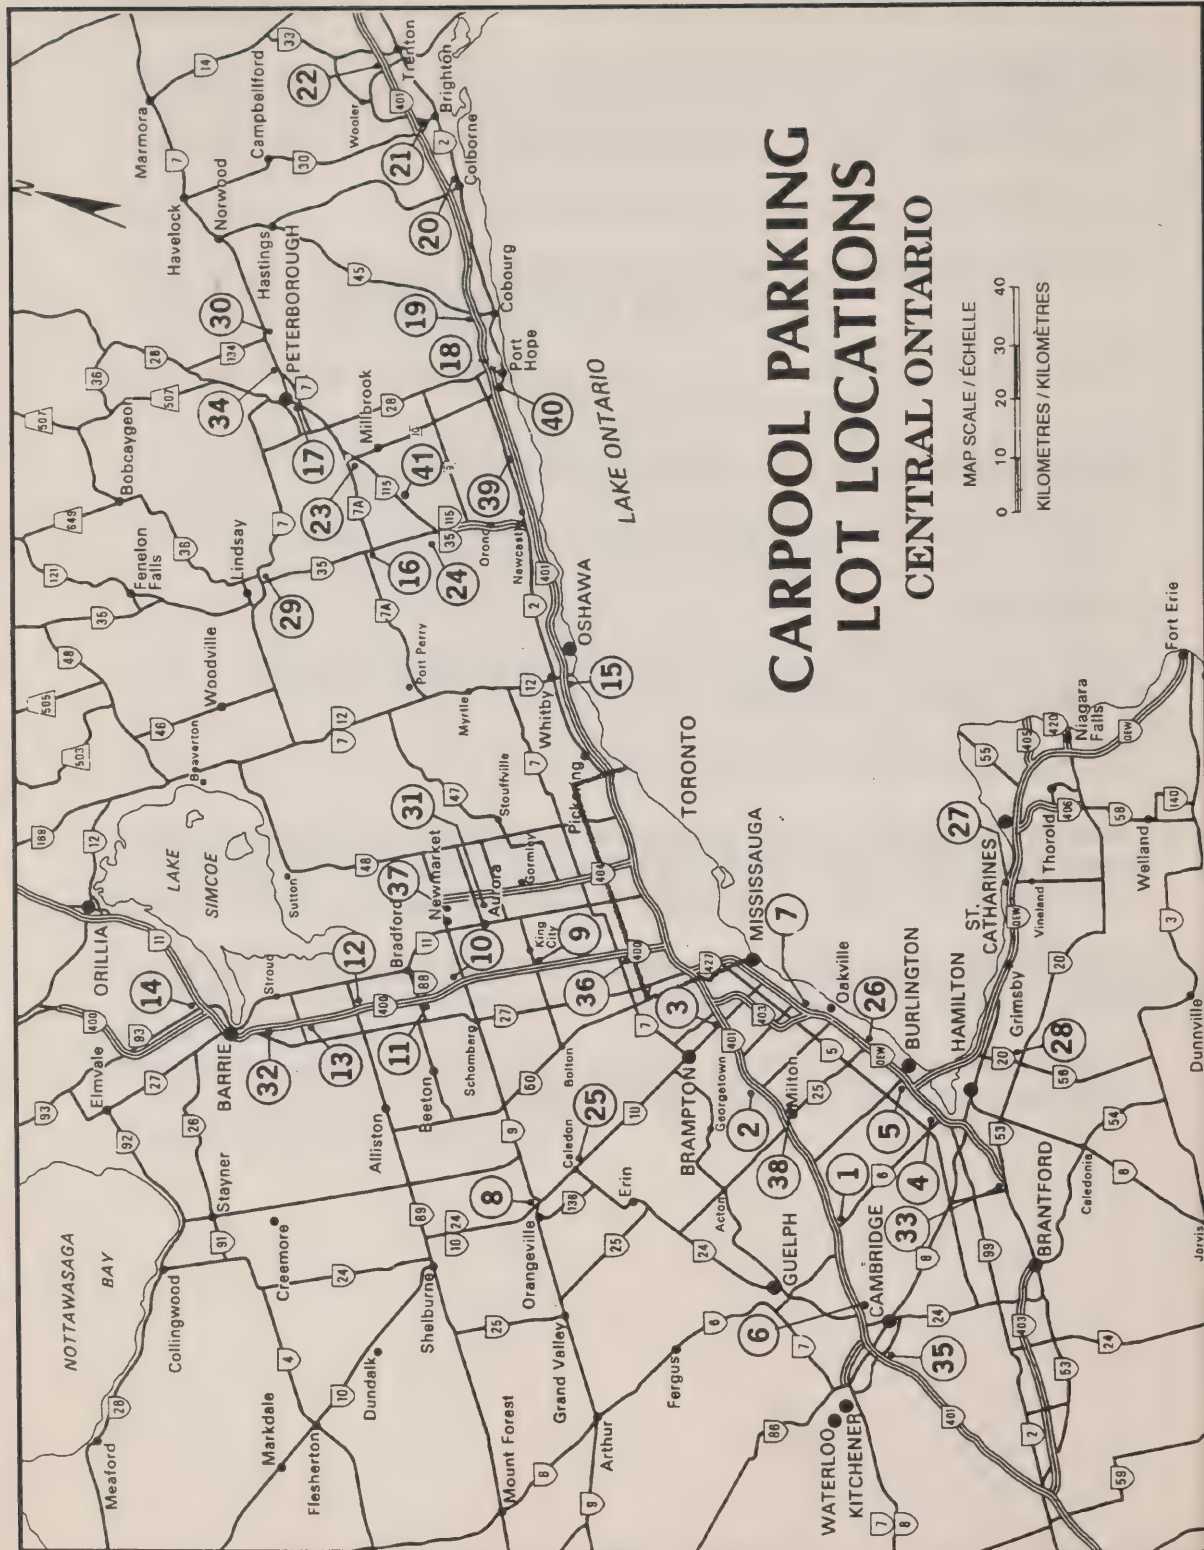

These benefits are calculated based on the following assumptions:

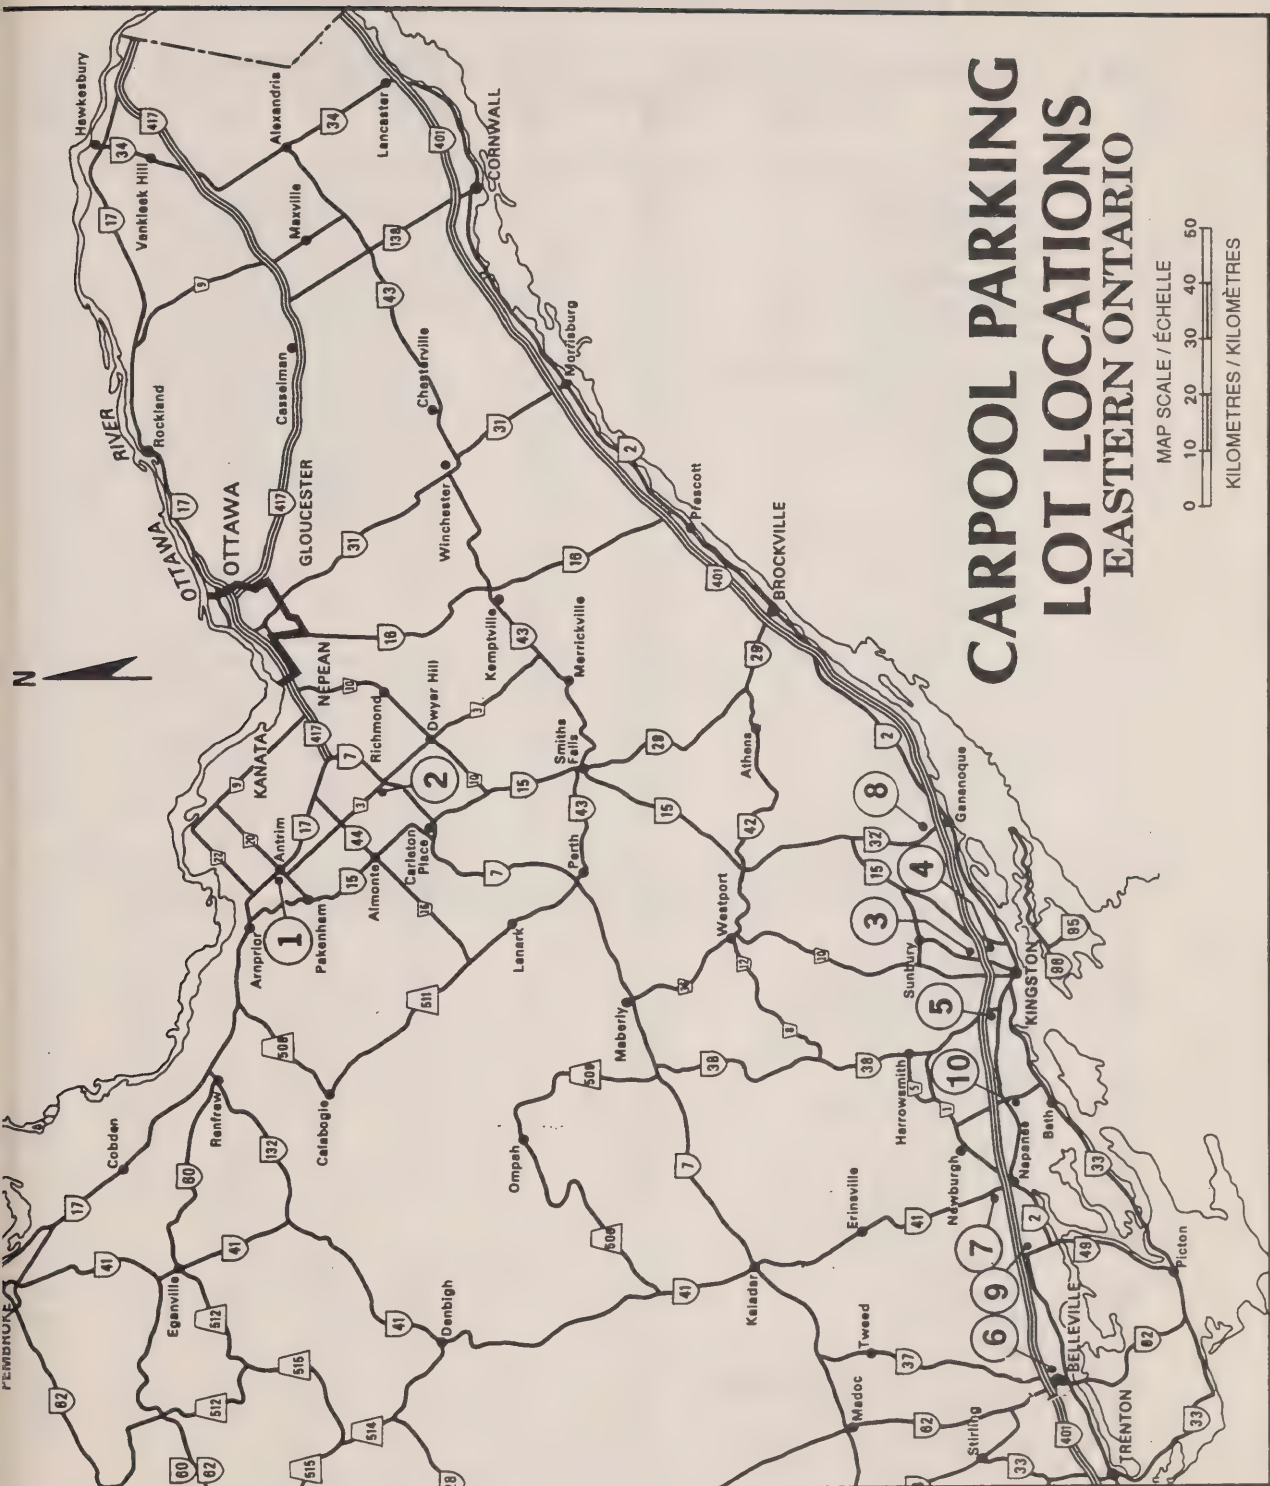

- Average distance from lot to work: 47.2 km. Taken from TEMP report SAR-81-02, Carpool Parking in the Toronto Commutershed (based on a 1979 survey).
- Fuel efficiency of vehicles: 12.7 L/100 km based on Statistics Canada 1988 Fuel Consumption Survey.
- 250 working days per year.

These figures represent only the savings generated by daytime users of the parking lots during a normal work week. Further savings are generated by the many weekend and evening users of the lots, who carpool perhaps for shopping or recreational purposes.

The 3802 parking spaces provide a safe, convenient, and highly visible service to the public.

Thanks to staff in Chatham, Ottawa, Sault Ste. Marie, North Bay, Sudbury, and Kingston for carrying out the surveys in their respective districts.

SUMMARY OF OFFICIAL MINISTRY PARKING LOTS

Lot #	Lot Location	# of Spaces '92	Number of Vehicles Parked November					% Full '92

INTRODUCTION

The current annual inventory of carpool parking activity was conducted in November 1993. The inventory surveyed parking areas for the following: signs, facilities, and vehicle counts.

RESULTS

• Total number of official ministry parking lots:	57
• Total number of parking spaces:	3963
• Total number of vehicles parked:	2033
• Average overall occupancy:	51%

In recognition of the growing demand for carpool parking facilities, the Ministry of Transportation opened its first six carpool parking lots in 1979. Since that time, Ontario has continued to steadily expand and improve its network of carpool parking lots; the ministry now operates a total of 57 lots with approximately 3960 spaces.

In the year since the 1992 inventory, the ministry has opened two new carpool parking lots in Eastern Ontario and expanded three others, which altogether increased the number of spaces by 161 (4.2%). Improvements were also made to several other lots.

The number of vehicles using the lots dropped slightly from last year, due in part to the relative stability of fuel prices and the recession. Seven lots were at or near full capacity at the time of the survey.

As part of the inventory, many other sites were checked for carpool parking activity. Fourteen sites with carpool activity are identified in the inventory. A total of 146 vehicles were parked at these sites.

Four carpool lots established by the Municipality of Sutton and the counties of Victoria, Durham, and the Regional Municipality of Ottawa-Carleton were surveyed.

BENEFITS

The 2033 vehicles parked in official ministry parking lots:

- **SAVE ENERGY** – 6 087 000 L of gasoline annually.
- **REDUCE CONGESTION** – reduced annual vehicle kilometres travelled by 47 930 000 (during the peak hours).
- **IMPROVE SAFETY** – around intersections; vehicles are no longer parked along interchange ramps.

These benefits are calculated based on the following assumptions:

- Average distance from lot to work: 47.2 km. Taken from TEMP report SAR-81-02, Carpool Parking in the Toronto Commutershed (based on a 1979 survey).
- Fuel efficiency of vehicles: 12.7 L/100 km based on Statistics Canada 1988 Fuel Consumption Survey.
- 250 working days per year.

These figures represent only the savings generated by daytime users of the parking lots during a normal work week. Further savings are generated by the many weekend and evening users of the lots, who carpool perhaps for shopping or recreational purposes.

The 3963 parking spaces provide a safe, convenient, and highly visible service to the public.

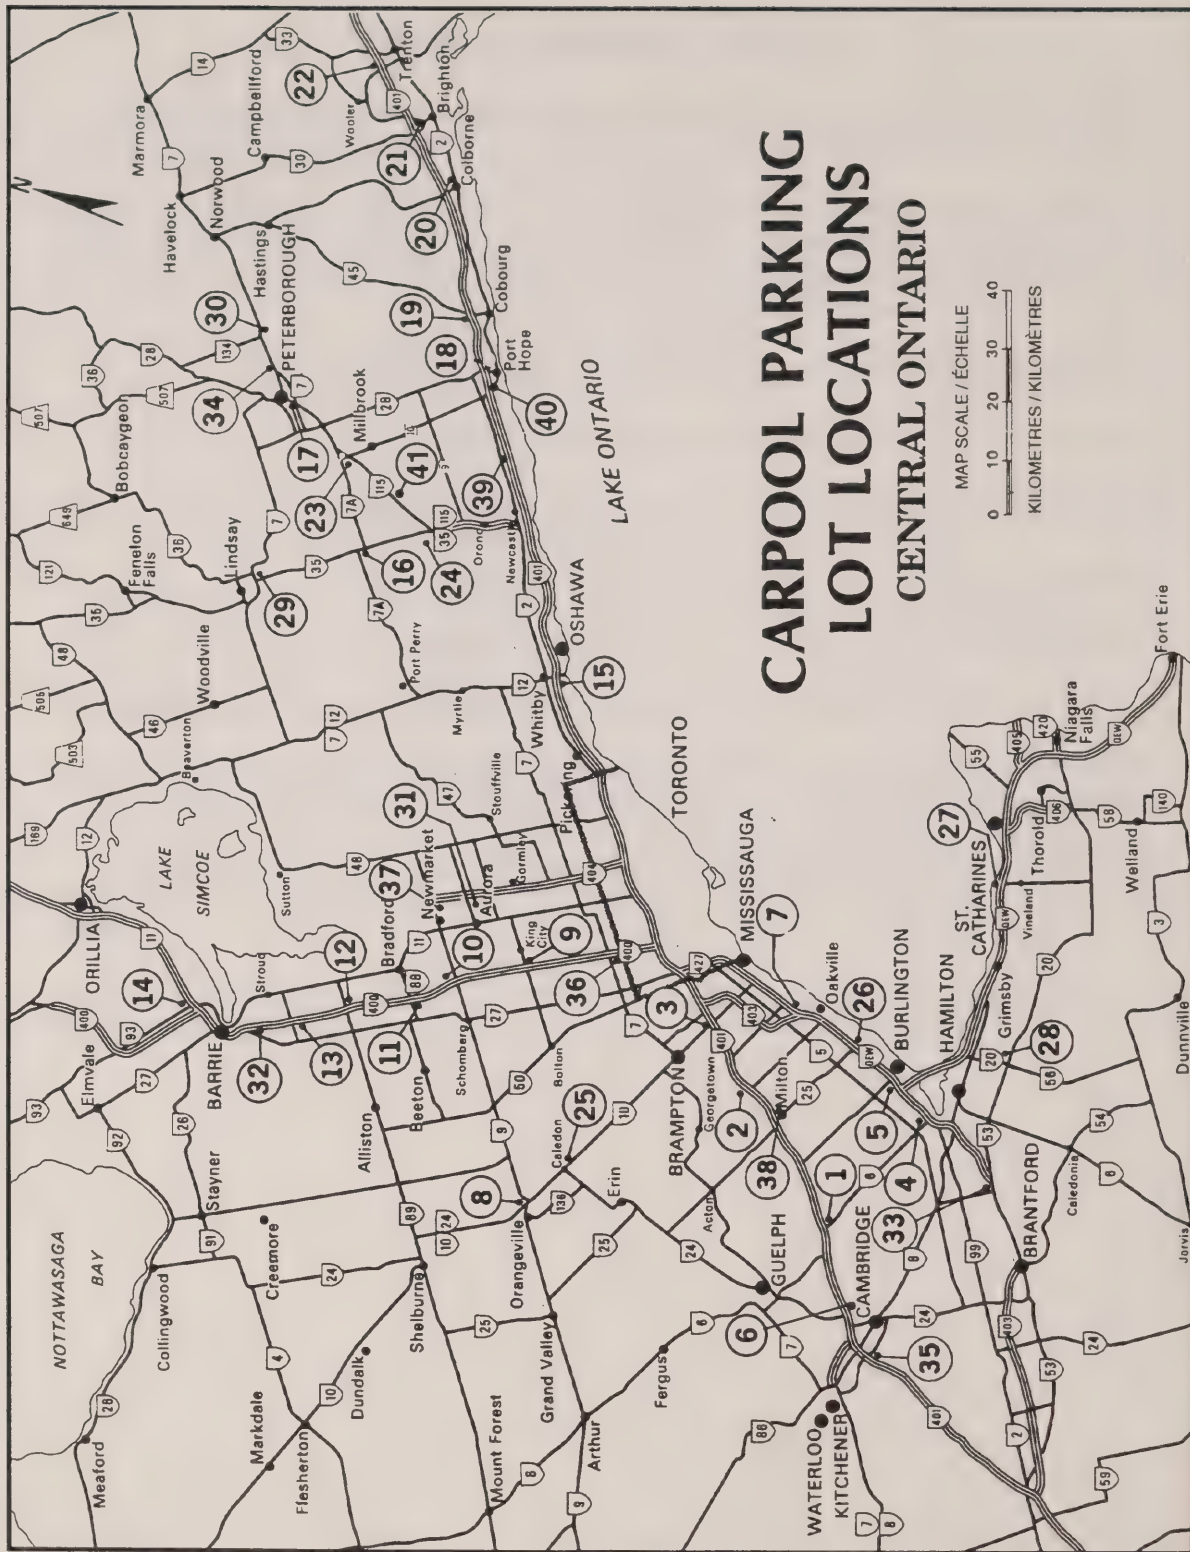

Thanks to staff in Chatham, Sault Ste. Marie, North Bay, and Sudbury for carrying out the surveys in their respective districts.

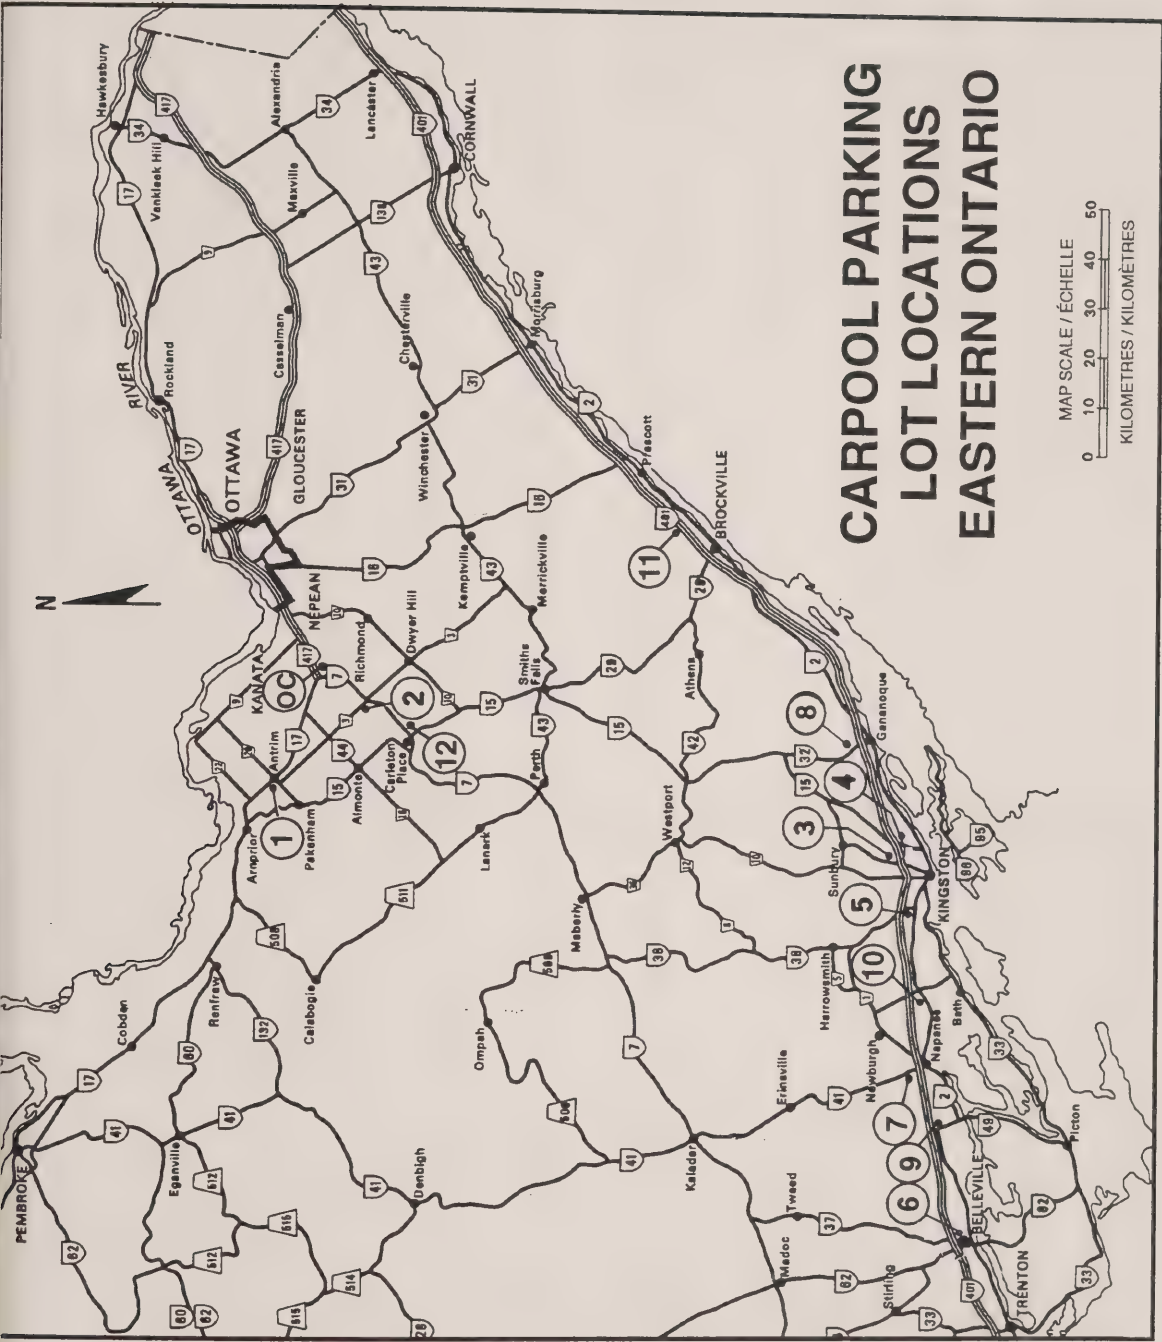

CARPOOL PARKING LOT SURVEY

During the fall of 1992, Mr. Bassam Hamwi, a graduate student from Carleton University in cooperation with the ministry carried out a user survey at six carpool lots in Central Ontario.

The survey was designed to identify the factors that influence ridesharing propensity and the characteristics of commuters who are already ridesharing. Other objectives were to look at the deterrents as perceived by solo drivers and the conditions under which solo drivers are likely to rideshare. The following is a brief summary of the report.

- In general, ridesharers are highly educated and work in large corporations;
- Seventy-nine percent of ridesharing is among co-workers;
- The percentage of males ridesharing is four times that of females;
- Fifty percent of ridesharers commute over 60 km one way;
- The average trip length for ridesharers is greater than for solo drivers;
- The most quoted reasons for ridesharing were financial savings and environmental concerns;
- The most quoted reasons for not ridesharing were the desire not to be constrained by social requirements, the need of the car for personal business, and irregular work hours;
- An increase in fuel prices is the most likely reason to convince solo drivers to switch to ridesharing.

Unsigned Parking Areas	68
Official Municipal Carpool Lots	81

INTRODUCTION

The current annual inventory of carpool parking activity was conducted in November 1994. The inventory surveyed parking areas for the following: signs, facilities, and vehicle counts.

RESULTS

• Total number of official ministry parking lots:	57
• Total number of parking spaces:	3,971
• Total number of vehicles parked:	2,110
• Average overall occupancy:	53%

In recognition of the growing demand for carpool parking facilities, the Ministry of Transportation opened its first six carpool parking lots in 1979. Since that time, Ontario has continued to steadily expand and improve its network of carpool parking lots; the ministry now operates a total of 57 lots with approximately 3,970 spaces.

In the year since the 1993 inventory, the ministry has made improvements to several of the lots including the installation of telephones and paving.

The number of vehicles using the lots increased slightly from last year, due in part to the improving economy, and reverses the downward trend seen over the past three years. Eight lots were at or near full capacity at the time of the survey.

As part of the inventory, many other sites were checked for carpool parking activity. Twelve sites are identified in the inventory with a total of 109 vehicles parked at these locations.

Four carpool lots established by the Municipality of Sutton and the counties of Victoria, Durham, and the Regional Municipality of Ottawa-Carleton were surveyed.

BENEFITS

The 2,110 vehicles parked in official ministry parking lots:

- **SAVE ENERGY** – 6,317,000 L of gasoline annually.
- **REDUCE CONGESTION** – reduced annual vehicle kilometres travelled by 49,745,000 (during the peak hours).
- **IMPROVE SAFETY** – around intersections; vehicles are no longer parked along interchange ramps.

These benefits are calculated based on the following assumptions:

- Average distance from lot to work: 47.2 km. Taken from TEMP report SAR-81-02, Carpool Parking in the Toronto Commutershed (based on a 1979 survey).
- Fuel efficiency of vehicles: 12.7 L/100 km based on Statistics Canada 1988 Fuel Consumption Survey.
- 250 working days per year.

These figures represent only the savings generated by daytime users of the parking lots during a normal work week. Further savings are generated by the many weekend and evening users of the lots, who carpool perhaps for shopping or recreational purposes.

The 3,971 parking spaces provide a safe, convenient, and highly visible service to the public.

Thanks to staff in Chatham, Kingston, Sault Ste. Marie, North Bay, Sudbury, and Ottawa for carrying out the surveys in their respective districts.

SHARE-A-RIDE MATCHING SERVICE

The building of commuter carpool lots is one way the Ministry is helping alleviate the growing problem of traffic congestion on our highways. Now, as a complement to this program, a new phone-based carpooling matching system has been developed to help match not only the carpoolers who use these lots, but all of Ontario's commuters.

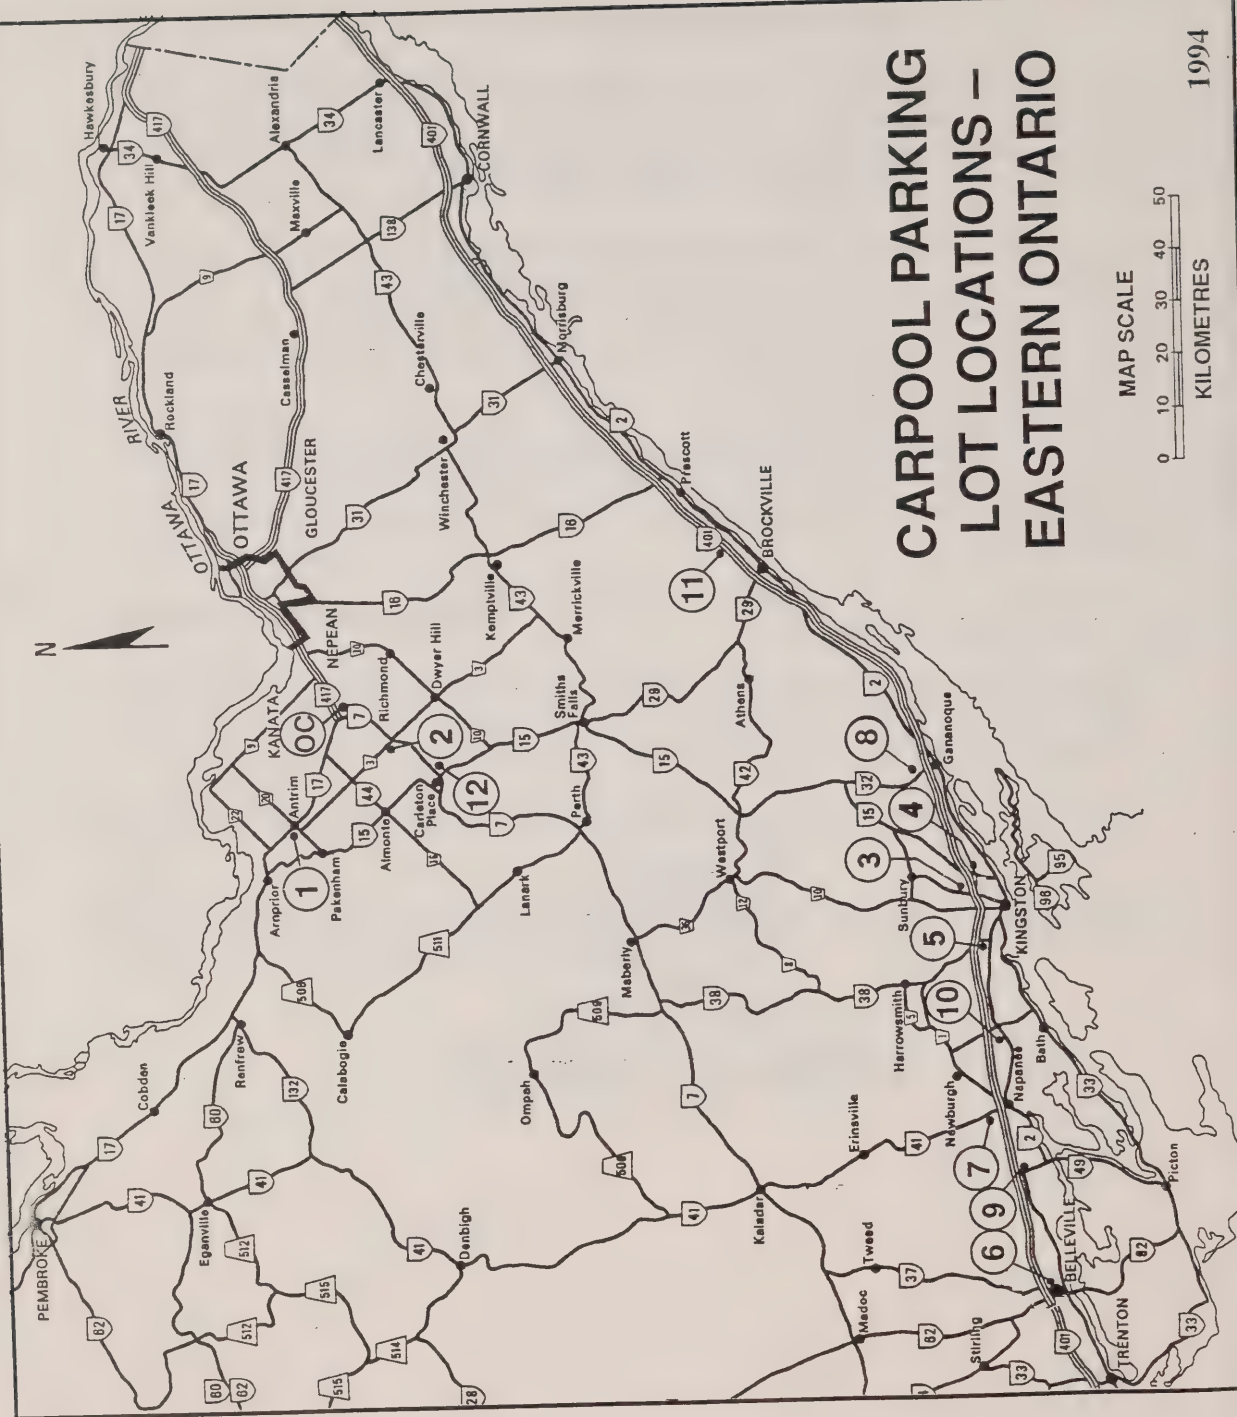

During the spring of 1994 the MBS's Green Workplace Office in conjunction with the Ministry of Transportation, Ministry of Environment and Energy and the Federal Government introduced a interactive computer based carpool matching system to all Provincial and Federal Government employees in Ontario. A strategy is being developed to extend this service throughout Ontario.

By calling 1-800-56-SHARE (1-800-567-4273) on a touch-tone phone, potential carpoolers can now access a computerized matching system to find co-riders with similar commuting patterns. It can be used to find carpool partners to commute to work, carpool lots or public transit stations.

The service is free to the user, can be accessed from anywhere in Ontario, and is available in both French and English.

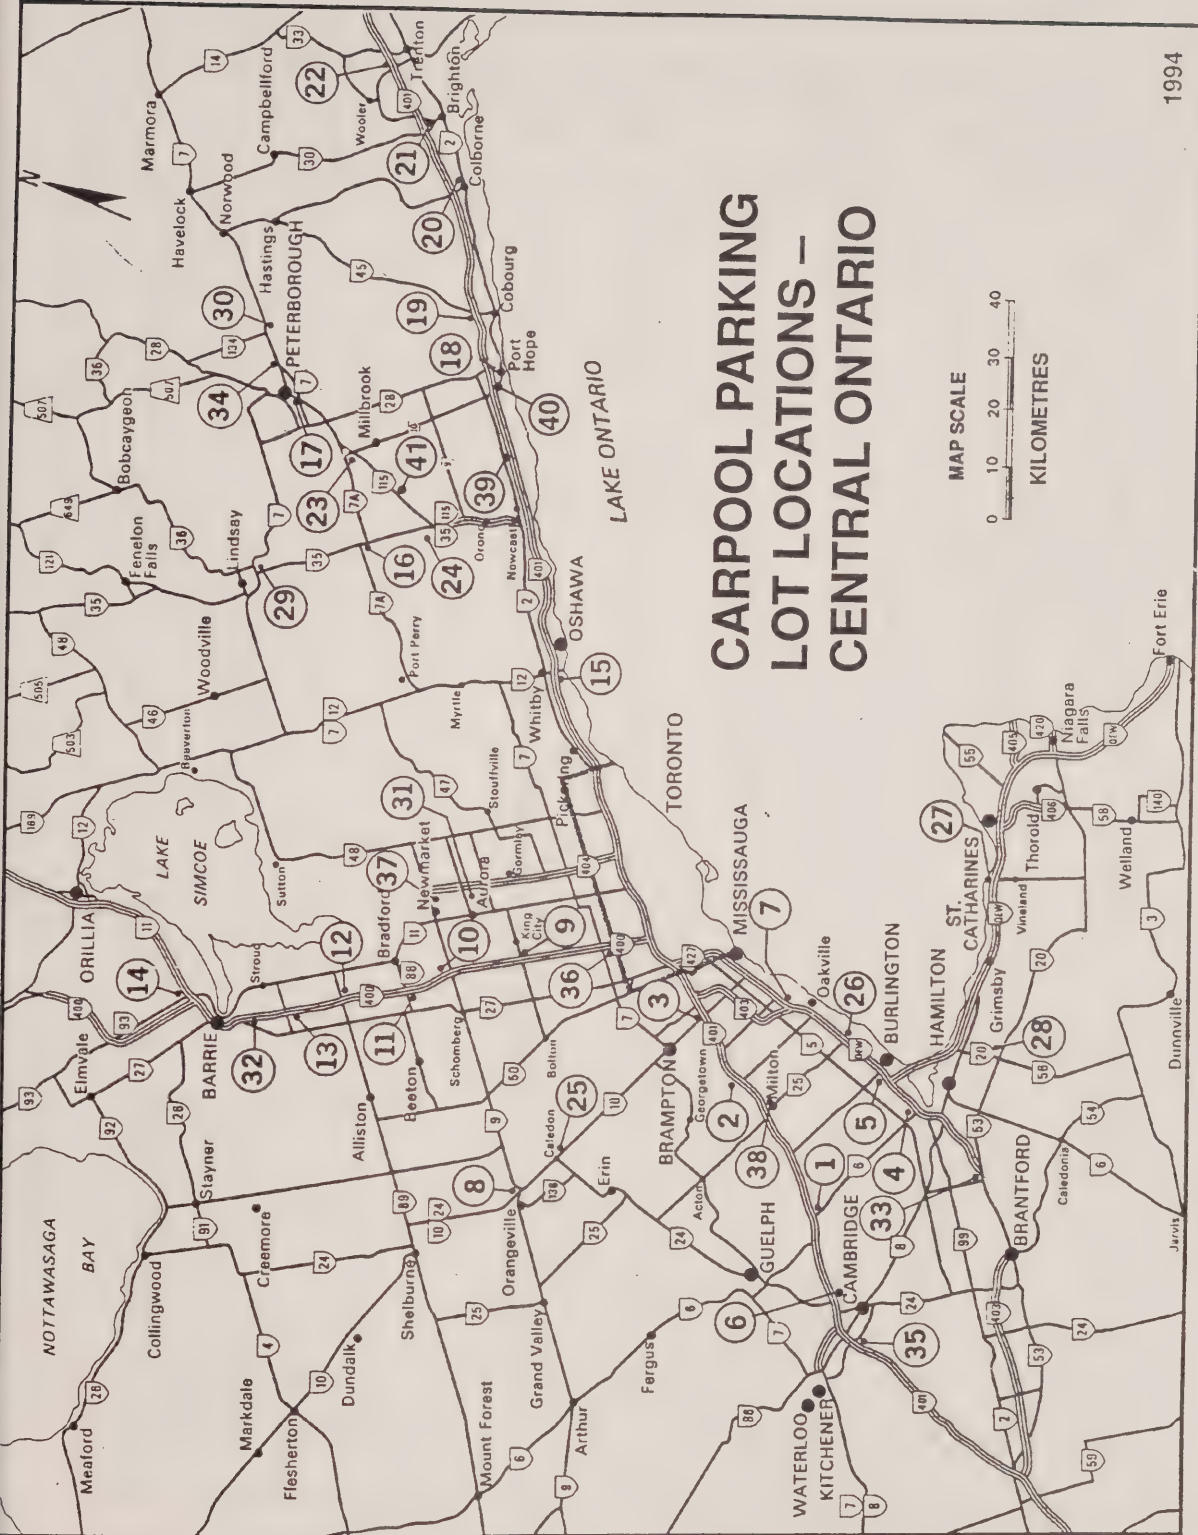

Share-A-Ride
1-800-56-SHARE
